

**General hints:**

**A. Surfacing requirements**

This piece of equipment is intended for children to play with, rather than on, and therefore has not intended body support. No free height of fall is thereby stipulated.

**B. Foundations**

No concrete foundations required.

**C. Attention**

The wall must have a sufficient carrying capacity, as the effective force is higher than the own weight of the disc.

**Special information**

Tested by TÜV Product Service GmbH.

Please do not alter any parts of the equipment or the construction itself since this may affect the safety standards and your guarantee.

We reserve the right to make technical alterations!  
For further information please call your local agent.

for wall attachment  
**Order no. 9.08000**

**Data for shipment:**

Number of parts: 1

1 equipment complete with 4 heavy duty bolts M10

**Weight:** approx. 40 kg  
**Size:** Ø 60 cm

**Required space including operational space**

200 x 200 cm

**Ground elevation**

Scale 1:50

all dimensions in cm

**Recommended assembly tools:**

- power drill
- set of ratchets
- set of spanners
- spirit level

Sequence of assembly operations:

1. Locate the site and take into account the space required, including the safety distances, according to the ground elevation on page 1.
2. Start surveying at the point of reference.  
 The height of attachment can vary between 120 and 170 cm and should comply with the target group (children, grown-ups, wheelchair drivers etc.).
3. Use the drilling jig (see page 3) to drill 4 holes for the heavy duty bolts.
4. Set heavy duty bolts.
5. Screw disc onto the wall.
6. Check for function.
7. Repair minor damages caused during assembly or transportation.
8. Please ensure that all assembly aids, e. g. excess bolts, assembly instructions, distance battens or tape are removed entirely from the play equipment and the playground after work is finished.

**Please note that after about 6 weeks all screws and bolts need to be checked and, if necessary, retightened.**
